

SIGNS AND SYMPTOMS OVERVIEW

Mental health concerns can be genetic (Biology) or due to a child's life experiences (i.e., Backstory, Biography, or Behaviors). Stress and trauma can reshape pathways in the brain that influence children and adolescents' behaviors, thoughts, feelings, and physical demeanor. The table below overviews common signs and symptoms of some of the most prevalent mental health concerns affecting children and adolescents in the United States.

	DEPRESSION	ANXIETY	SUICIDAL IDEATION
BEHAVIOR	<ul style="list-style-type: none"> • Not going out anymore • Not getting things done at work/school • Withdrawing from others • Substance/alcohol use • Unable to concentrate • Not doing usual fun activities 	<ul style="list-style-type: none"> • Withdrawing from or fearing certain objects or situations • Urges to perform rituals • Not being assertive (i.e., avoiding eye contact) • Difficulty making decisions • Cautious due to feeling unsafe 	<ul style="list-style-type: none"> • Threatening to kill oneself • Looking for things like pills or weapons • Talking or writing about death • Withdrawing from others • Packing/giving things away • Substance/alcohol use
